**(54) PRODUCTION OF
TAXANE TYPE DITERPENE**

(57) Abstract:

PURPOSE: To industrially and advantageously obtain the subject compound useful as a therapeutic agent for ovarian carcinoma, mastocarcinoma, lung cancer, etc., by culturing a cell or a tissue of a plant capable of producing a taxane type terpene in the presence of a specific jasmonic acid and recovering a formed product from the culture mixture.

CONSTITUTION: A cell or a tissue of a plant (e.g. *Taxus baccata*) capable of producing taxane type terpene is cultured in the presence of a jasmonic acid of formula I {R1 is a 1-4C alkyl, a group of formula II [R6 is OH, an OM (M is an alkali metal, an alkaline earth metal or NH₄), an NHR7 (R7 is H, a 1-4C acyl, a 1-4C alkyl or amino acid residue) or an OR8 (R8 is a 1-4C alkyl or a hydrocarbon residue; (n) is an integer of 1-7]; R2 to R5 are each H or R2 and R3, R3 and R4 or R4 and R5 may form a double bond together; R9 is OH or O-hydrocarbon residue; the fivemembered ring may be further substituted with a hydroxyl group and may form a double bond between

adjoining carbon atoms} and a product is recovered to give the objective taxane type terpene (e.g. taxol).
